Problem Statement: Health Care	
No of Clients:	

Abstract:

For my CSP project,I have chosen the topic **Health Care** to design and develop a mobile application that helps users manage their overall health and well-being efficiently. The Health-Care Application is a comprehensive health management system that allows users to track fitness activities, manage medication schedules, and schedule healthcare appointments in an organized manner.

The application provides secure user authentication and profile management to ensure personalized access. It includes features such as fitness tracking, hydration and sleep reminders, medication management with customizable scheduling and notifications, and appointment booking with reminder alerts. The app is designed with an intuitive and user-friendly interface to ensure smooth navigation and ease of use.

Technology to be used:

- **Flutter:** Used to develop the cross-platform mobile application with a responsive and attractive user interface.
- **Dart:** Programming language used for developing the application logic.
- **Firebase Authentication:** Provides secure user registration and login functionality.
- **Firebase Firestore:** Used for storing user data such as fitness logs, medication schedules, and appointments in a secure cloud database.
- **Local Notifications:** Used to send reminders for medication, hydration, sleep, and appointments.
